

Messaging Service Code Review

Fill out this sheet for your own code and for two other students you are assigned to review.

Student Name: **Jared Craig**
Reviewed By: **Self**

Check the boxes below to indicate which tests pass successfully. Circle the boxes that do not work correctly and include a written statement explaining the error that occurred.

Student Client and Server

☒ Command line parsing

The server starts on the supplied port and can be contacted by clients using the host and port information.

☒ Message Protocol

The client is able to send, list, and read multiple messages for a variety of users. Multiple clients can access the server, but one at a time.

☒ User Interface

The user interface works as specified.

Interoperability

☒ Message Protocol
Passes the Message Protocol tests in the testing script.

☒ Errors
Passes the Errors test in the testing script.

☒ Large Messages
Passes the Large Message test in the testing script.

☒ Partial Messages
Passes the Partial Messages test in the testing script. The student's code is efficient and does NOT read one byte at a time when calling recv().

General Feedback

☒ Feedback
Any additional thoughts about the code: things done well, areas for improvement.
